## US Government Concedes Hep B Vaccine Causes Systemic Lupus Erythematosus

Posted on April 25, 2011 by ChildHealthSafety

Here we present the US Federal Court's decision and order in full below.

The claimant in this case was dead when the damages were awarded. Tambra Harris died on November 9, 2009. Tambra's mother and Administratrix of her estate, Louvonia Deniece Harris, was substituted as petitioner, and an amended petition was filed on October 15, 2010.

Hepatitis B vaccine is given to US infants at birth for a disease which they are not at risk of.

Why? At risk groups are intravenous "recreational" drug abusers and those who practice unsafe sex – which rules out new born babies.

*Whilst the risk factors for babies have changed little, there is now impressive evidence that for a preventive measure, hepatitis B vaccine is remarkable for the frequency, variety and severity of complications from its use. The toxicity of this vaccine is so unusual that, even if crucial data are regrettably concealed or covered by Court order, scientific evidence is already far higher than normally needed to justify severe restrictive measures."*

Quote from French expert Dr. Marc Girard. **See CHS article below for full details: UK Government Caught Lying On Baby Hep B Vax Safety.** Whilst other evidence is embargoed by the French Courts, Dr Girard has been able to publish a scientific review of the unembargoed evidence from the French Courts of the vaccine's hazards (Autoimmun Rev 2005; 4: 96-100). Dr Girard shows that French health authorities suppress studies demonstrating serious risks. Hepatitis B vaccine has been shown in many peer reviewed research papers [including from Harvard University – detailed references at end] to be associated with numerous infant deaths in the USA and Europe, multiple sclerosis and numerous chronic auto-immune disorders [see below for more details].

**In the United States Court of Federal Claims**

**OFFICE OF SPECIAL MASTERS**

**No. 01-499V**

**(E-Filed: March 23, 2011)** (<http://www.uscfc.uscourts.gov/sites/default/files/CAMPBELL-SMITH.HARRIS032311.pdf>).

**TO BE PUBLISHED – Stipulated Damages; Hepatitis B Vaccine; Alleged Injuries Include Systemic Lupus Erythematosus (SLE)**

---

LOUONIA DENIECE HARRIS,  
Administratrix of the Estate of TAMBRA  
HARRIS,

Petitioner,

v.

SECRETARY OF THE DEPARTMENT OF  
HEALTH AND HUMAN SERVICES,

Respondent.

---

**STIPULATED DAMAGES DECISION<sup>1</sup>**

On August 29, 2001, Tambra Harris (“petitioner”), filed a petition for compensation alleging that she suffered certain injuries as a result of receiving a vaccination. <sup>2</sup>

Among the injuries petitioner alleged that she had suffered as a result of receiving a hepatitis B vaccination was systemic lupus erythematosus (SLE). She sought an award under the National Vaccine Injury Compensation Program <sup>3</sup>

On March 22, 2011, counsel for both parties filed a stipulation, stating that a decision should be entered awarding compensation. The parties stipulated that petitioner shall receive the following compensation:

A lump sum of \$ 475,000.00 in the form of a check payable to petitioner as Administratrix of the Estate of Tambra Harris. This amount represents compensation for all damages that would be available under 42 U.S.C. §300aa-15(a);

and

A lump sum payment of \$ 9,914.00 in the form of a check jointly payable to petitioner and the State of Mississippi Division of Medicaid, Attn: Ms. Carolyn Hall Williams, Third Party Liability Unit, 550 High Street, Walter Sillers Building, Suite 1000, Jackson MS 39201, for reimbursement of Mississippi’s Medicaid expenses related to Tambra’s care.

Stipulation ¶ 8(a) and ¶ 8(b).

The undersigned approves the requested amount for petitioner’s compensation. Accordingly, an award should be made in the form of a check payable to petitioner as Administratrix of the Estate of Tambra Harris in the amount of \$ 475,000.00. In addition, an additional award should be made in the form of a check payable jointly to petitioner and the State of Mississippi Division of Medicaid in the amount of \$ 9,914.00. In the absence of a motion for review filed pursuant to RCFC Appendix B, the clerk of the court SHALL ENTER JUDGMENT in accordance with the terms of the parties’ stipulation. <sup>4</sup>

IT IS SO ORDERED.

s/Patricia E. Campbell-Smith

Patricia E. Campbell-Smith

Special Master.

1 Because this decision contains a reasoned explanation for the undersigned's action in this case, the undersigned intends to post this decision on the United States Court of Federal Claims' website, in accordance with the E-Government Act of 2002, Pub. L. No. 107-347, 116 Stat. 2899, 2913 (Dec. 17, 2002). As provided by Vaccine Rule 18(b), each party has 14 days within which to request redaction "of any information furnished by that party: (1) that is a trade secret or commercial or financial in substance and is privileged or confidential; or (2) that includes medical files or similar files, the disclosure of which would constitute a clearly unwarranted invasion of privacy." Vaccine Rule 18(b). Otherwise, "the entire" decision will be available to the public. Id. (the Act or the National Childhood Vaccine Injury Act of 1986, Pub. L. No. 99-660, 100 Stat. 3755, codified as amended, 42 U.S.C. §§ 300aa-1 to -34 (2006) (Vaccine Act or the Act). All citations in this decision to individual sections of the Vaccine Act are to 42 U.S.C. § 300aa.

2 Tandra Harris died on November 9, 2009. Tandra's mother and Administratrix of her estate, Louvonia Deniece Harris, was substituted as petitioner, and an amended petition was filed on October 15, 2010.

3 The National Vaccine Injury Compensation Program is set forth in Part 2 of the Program). 42 U.S.C. §§ 300aa-1 to -34 (2006).

4 Pursuant to Vaccine Rule 11(a), entry of judgment is expedited by the parties' joint filing of notice renouncing the right to seek review.

## UK Government Caught Lying On Baby Hep B Vax Safety

Posted on April 13, 2009

The British Government has been caught lying this week in news reports in two British Sunday newspapers about a proposal to give 8 week old British babies Hepatitis B vaccinations.

A Department of Health spokesman was quoted claiming:-

*The safety of children is always paramount whenever decisions are taken regarding what vaccines are included as part of the child vaccination programme.*": [New vaccination fears over plan to give hepatitis jabs at eight weeks old](http://www.dailymail.co.uk/health/article-1169330/New-vaccination-fears-over-plan-to-give-hepatitis-jabs-at-eight-weeks-old.html) (<http://www.dailymail.co.uk/health/article-1169330/New-vaccination-fears-over-plan-to-give-hepatitis-jabs-at-eight-weeks-old.html>) Mail on Sunday 12th April 2009, [Vaccination fears over plan for Hepatitis B jabs for babies](http://www.telegraph.co.uk/health/healthnews/5145192/Vaccination-fears-over-plan-for-Hepatitis-B-jabs-for-babies.html) (<http://www.telegraph.co.uk/health/healthnews/5145192/Vaccination-fears-over-plan-for-Hepatitis-B-jabs-for-babies.html>): Sunday Telegraph 12 Apr 2009.

Only cost and not safety is legally permitted to be an objection under the UK New Labour Government's new law in effect from April 1 this year [full details below]. Whilst 8 week old babies are not at risk from Hepatitis B, they are from the vaccine [full details below]. And ~~six~~ five EU Hepatitis B vaccines have lost

their marketing authorisations since 2000, ~~the latest being last week~~ ~~GlaxoSmithKline's Hepatitis B Engerix B vaccine [full details below].~~

Hepatitis B vaccine has been shown in many peer reviewed research papers [including from Harvard University – detailed references at end] to be associated with numerous infant deaths in the USA and Europe, multiple sclerosis and numerous chronic auto-immune disorders. These latter include Guillain-Barre syndrome, lupus, rheumatism, blood disorders and chronic fatigue. The only potential claimed infant risk group is alleged to be babies born in the UK to mothers from countries with claimed-to-have high rates of infection. Around 2000 British born infants are already being vaccinated annually in the UK. At risk groups are intravenous “recreational” drug abusers and those who practice unsafe sex – which rules out 8 week old babies.

There has been a criminal judicial investigation in France into the adverse effects of this vaccine. France was the first country to introduce universal Hepatitis B vaccination and saw effects which included the first ever seen and harrowing cases of childhood multiple sclerosis in France.

Research also shows that the prevalence of Hepatitis B is low in the UK, consistent with previous estimates and suggesting that many infections were acquired outside the UK. This all suggests Government should concentrate its efforts on effective treatment rather than vaccination of infants against a disease which does not affect them. Proponents of the vaccination claim rates of Hepatitis B infection are “spiralling” but based on “estimates”. Regrettably “estimates” can be “pulled” in one direction or another depending on which direction those responsible for the “estimates” are more interested in seeing them move. And in these circumstances, they can never be justification for vaccinating all babies to protect adult drug abusers and practitioners of unsafe sex.

Additionally, UK and EU authorities have withdrawn marketing licences for 6 5 Hepatitis vaccines claiming a lack of efficacy in some cases, voluntary withdrawal by the applicant in others and denying in one case [Hexavac] any association with 6 infant deaths in Germany. The deaths were reported in a 2005 research paper as possibly caused by the vaccine: “Unexplained cases of sudden infant death shortly after hexavalent vaccination.” Zinka B, Rauch E, Buettner A, Rueff F, Penning R. – Vaccine. 2005 May 18.

~~The most recent vaccine to lose its authorisation was last~~ Last week the UK Medicines and Healthcare Products regulatory Agency ~~withdrew~~ required recall of a batch of GlaxoSmithKline's Hepatitis B Engerix B vaccine ~~marketing authorisation~~ with Professor Kent Woods, chief executive of the MHRA stating:-

*The safety of the vaccine is not in question, but it is suspected to be ineffective.”* MHRA recalls GSK's Hepatitis B vaccine (<http://www.hayspharma.com/news/news-item/19111563>) – 07 Apr 2009 – Regulatory Affairs – Hays Pharma News

The other most recent vaccine to lose its European marketing authorisation was Quintanrix [also from GSK] in August last year. The other vaccines are: Infanrix [GSK], Hepacare [Celltech] and Primavax [Aventis Pasteur].

So if ‘*The safety of children is always paramount*’ why the British Department of Health is even contemplating such a vaccine for 8 week old babies is beyond comprehension.”

And do vaccines cause autistic conditions? If you read nothing else we strongly recommend you read this: PDF Download – Text of May 5th 2008 email from US HRSA to Sharyl Attkisson of CBS News (<https://childhealthsafety.files.wordpress.com/2011/01/attkisson-cbs-hrsa-email-exchanges-autistic->

[conditions-vaccines.pdf](#)]). In it the US Health Resources Services Administration [HRSA] state to CBS News reporter Sharyl Attkisson

*We have compensated cases in which children exhibited an encephalopathy, or general brain disease. Encephalopathy may be accompanied by a medical progression of an array of symptoms including autistic behavior, autism, or seizures."*

After the Hannah Poling story broke in the USA in February 2008 [see CHS article [here](#) ([../2011/04/24/2011/01/08/2009/01/13/secret-british-mmr-vaccine-files-forced-open-by-legal-action/#US\\_Developments](#))] under the media spotlight numerous US health officials and agencies conceded on broadcast US nationwide TV news from CBS and CNN. Full details with links to the original sources can be found in this CHS article: [Vaccination Causes Autism – Say US Government & Merck’s Director of Vaccines](#) ([../2011/04/24/2011/01/08/2009/01/13/2011/04/09/2010/06/30/vaccination-causes-autism-%e2%80%93-say-us-government-merck%e2%80%99s-director-of%c2%a0vaccines/](#)).

Hannah developed an autistic condition after 9 vaccines administered the same day.

But there is worse to come and it shows the UK’s New Labour Government has been irresponsible handing recently from 1st April 2009 legal power to dictate vaccination policy exclusively to the Joint Committee on Vaccination and Immunisation: [UK Government Hands Drug Industry Control of Childhood Vaccination](#) ([../2009/04/13/2009/03/08/pharma-decide-uk-vaccination/](#)). The JCVI regrettably has a demonstrable track-record of recklessness on safety up to and including the present day, as shown in FOI documents: [British Government’s Reckless Disregard for Child Health Safety](#) ([../2009/04/13/2009/01/13/secret-british-mmr-vaccine-files-forced-open-by-legal-action/#British\\_Government\\_Reckless](#)) and [UK Government Hands Drug Industry Control of Childhood Vaccination](#) ([../2009/04/13/2009/03/08/pharma-decide-uk-vaccination/](#)).

The DoH statement published in The Mail on Sunday is also untrue because:-

- Under the new law [The Health Protection \(Vaccination\) Regulations 2009](#) (<http://www.statutelaw.gov.uk/legResults.aspx?LegType=All+Legislation&title=The+Health+Protection+%28Vaccination%29+Regulations+2009&search>) which came into effect on 1st April for England only, the Secretary of State has no power on the grounds of safety to refuse to implement or reverse **any** Joint Committee on Vaccination and Immunisation recommendation
- the JCVI expressly has no remit to take safety into account in its decision-making
  - [that role is supposedly the MHRA’s but regrettably they seem to rubber stamp a great deal of what the drug industry come up with – as has been shown time and again and not just with vaccines, but drugs like Seroxat – the “anti-depressant” shown not to work compared to placebo in some trials and which causes adolescents to be 3 times more likely to commit suicide in others.]
- the only consideration the Secretary of State can take into account in rejecting JCVI recommendations is cost-effectiveness – not safety
- contrary to the UK Department of Health claims, no childhood vaccines used on British children have ever been tested according to the gold standard of evidence – randomised placebo controlled clinical trials.
- health officials refuse to ensure large scale studies of total health outcomes between vaccinated and unvaccinated individuals are carried out. These should show differences in overall health between these groups and some medical professionals believe this is because the studies would reveal the unvaccinated are healthier overall and high levels of chronic diseases in vaccinated individuals.

- there is no clinical benefit to infants from Hepatitis B vaccine but infants are put at risk of the known and unknown adverse effects
- this also means doctors and nurses are being expected to behave unethically and possibly criminally – because no caring parent will consent to a vaccine administered to an 8 week old baby on being told there are risks but no benefits

The main reason for the new drive to more and more vaccines – and this is well published in the trade press – is that the drug industry has been changing its business model. The financial markets have known for many years the old model would fail – that of patented “blockbuster” drugs:-

- the drug industry have made vaccines the new growth area because they are highly lucrative
  - they are drugs everyone gets – it is the same business model of Bill Gates’ Microsoft – pretty much everyone has to have Windows software – pretty much everyone gets vax’d
  - and the drug industry has been working hard behind-the-scenes to persuade everyone – especially legislators – that they are vital when they are not and lobbying for changes in law just like this new law – which was introduced without Parliamentary debate and appears to be unlawful per se: [UK Government Hands Drug Industry Control of Childhood Vaccination](http://2009/04/13/2009/03/08/pharma-decide-uk-vaccination/) ([./2009/04/13/2009/03/08/pharma-decide-uk-vaccination/](http://2009/04/13/2009/03/08/pharma-decide-uk-vaccination/)).

Dr Marc Girard, a specialist in the side effects of drugs and commissioned as a medical expert by French courts in the French criminal investigation into the introduction of universal Hepatitis B vaccination in France, suggests that even in high-endemic countries, the risk/benefit ratio of what he describes as “*this unusually toxic vaccine*” must be carefully re-assessed.

Regarding the health situation in the UK Dr Girard says the conclusion not to vaccinate is obvious. France was the first country to implement universal hepatitis B vaccination in 1994.

Whilst other evidence is embargoed by the French Courts, Dr. Marc Girard has also been able to publish a scientific review of the unembargoed evidence of the vaccine’s hazards (Autoimmun Rev 2005; 4: 96-100). Dr Girard shows that French health authorities suppress studies demonstrating serious risks.

Dr Girard has previously said:

*Whilst the risk factors for babies have changed little, there is now impressive evidence that for a preventive measure, hepatitis B vaccine is remarkable for the frequency, variety and severity of complications from its use. The toxicity of this vaccine is so unusual that, even if crucial data are regrettably concealed or covered by Court order, scientific evidence is already far higher than normally needed to justify severe restrictive measures.”*

## DEATHS, MULTIPLE SCLEROSIS AND OTHER ADVERSE EFFECTS

- “Unexplained cases of sudden infant death shortly after hexavalent vaccination.” Zinka B, Rauch E, Buettner A, Rueff F, Penning R. – Vaccine. 2005 May 18

*Vaccinations are considered to be the most effective and safe method preventing infectious diseases. Although hexavalent vaccines like Hexavac((R)) and Infanrix Hexa((R)) are assumed to be well tolerated and safe regarding the rate of immunity [Liese JG, Stojanov S, Berut F, Minini P, Harzer E, Jow S, et al. Large scale safety study of a liquid hexavalent vaccine (D-T-acP-IPV-PRP-T-HBs) administered at 2, 4, 6 and 12-14 months of age. Vaccine 2002;20:448-54; Mallet E, Fabre P, Pines E, Salomon H, Staub T, Schodel E, et al. Immunogenicity and safety of a new liquid hexavalent combines vaccine compared with separate administration of reference licensed vaccines in infants. Pediatr Infect Dis J 2000;19:1119-27], it was noticed that several cases of death occurred shortly after the vaccination. We report six cases of sudden infant death that occurred within 48h after hexavalent vaccination. At post-mortal examination, those cases showed unusual findings, especially in the brain and in laboratory tests. Crude calculations of local epidemiology are compatible with an association between hexavalent vaccination and unusual cases of sudden infant death. If confirmed in systematic studies, our findings would have potentially serious clinical implications.*

Neonatal Deaths After Hepatitis B Vaccine – The Vaccine Adverse Event Reporting System (<http://sids-network.org/experts/poa9078.pdf>), 1991-1998 – Arch Pediatr Adolesc Med. 1999;153:1279-1282

*Results: Of 1771 neonatal reports, there were 18 deaths in 8 boys and 9 girls (1 patient unclassified). The mean age at vaccination for these 18 cases was 12 days(range, 1-27 days); median time from vaccination to onset of symptoms was 2 days (range, 0-20 days); and median time from symptoms to death was 0 days (range, 0-15 days). The mean birth weight of the neonates (n = 15) was 3034 g (range, 1828-4678 g). The causes of death for the 17 autopsied cases were sudden infant death syndrome for 12, infection for 3, and 1 case each of intracerebral hemorrhage, accidental suffocation, and congenital heart disease. Conclusion: Few neonatal deaths following HepB vaccination have been reported, despite the use of at least 86 million doses of pediatric vaccine given in the United States since 1991. While the limitations of passive surveillance systems do not permit definitive inference, these data suggest that HepB immunization is not causing a clear increase in neonatal deaths.*

## Recombinant hepatitis B vaccine and the risk of multiple sclerosis

NEUROLOGY 2004;63:838-842

### A prospective study

**Miguel A. Hernán, MD, DrPH, Susan S. Jick, DSc, Michael J. Olek, DO and Hershel Jick, MD**

From the Department of Epidemiology (Dr. Hernán), Harvard School of Public Health, Boston; Boston Collaborative Drug Surveillance Program (Drs. Susan S. Jick and Hershel Jick), Boston University, Lexington, MA; and Department of Neurology (Dr. Olek), College of Medicine, University of California,

Irvine.

**Background:** A potential link between the recombinant hepatitis B vaccine and an increased risk of multiple sclerosis (MS) has been evaluated in several studies, but some of them have substantial methodologic limitations.

**Methods:** The authors conducted a nested case-control study within the General Practice Research Database (GPRD) in the United Kingdom. The authors identified patients who had a first MS diagnosis recorded in the GPRD between January 1993 and December 2000. Cases were patients with a diagnosis of MS confirmed through examination of medical records, and with at least 3 years of continuous recording in the GPRD before their date of first symptoms (index date). Up to 10 controls per case were randomly selected, matched on age, sex, practice, and date of joining the practice. Information on receipt of immunizations was obtained from the computer records.

**Results:** The analyses include 163 cases of MS and 1,604 controls. The OR of MS for vaccination within 3 years before the index date compared to no vaccination was 3.1 (95% CI 1.5, 6.3). No increased risk of MS was associated with tetanus and influenza vaccinations.

**Conclusions:** These findings are consistent with the hypothesis that immunization with the recombinant hepatitis B vaccine is associated with an increased risk of MS, and challenge the idea that the relation between hepatitis B vaccination and risk of MS is well understood.

Received March 31, 2004. Accepted in final form May 8, 2004.

Low Prevalence in The UK of Hepatitis B and Infections acquired abroad

The prevalence of hepatitis B infection in adults in England and Wales (<http://journals.cambridge.org/action/displayAbstract;jsessionid=E31476FAFFF964BE95A1C7421D5C0380.torfromPage=online&aid=39641>). – *Epidemiology and Infection* (1999), **122**:133-138 Cambridge University Press

*Cost effectiveness analyses of alternative hepatitis B vaccination programmes in England and Wales require a robust estimate of the lifetime risk of carriage. To this end, we report the prevalence of infection in 3781 anonymized individuals aged 15–44 years whose sera were submitted in 1996 to 16 microbiology laboratories in England and Wales. One hundred and forty-six individuals (3.9%) were confirmed as anti HBc positive, including 14 chronic carriers (0.37%). The prevalence of infection and carriage was higher in samples collected in London and increased with age. No increased risk of infection was seen in sera from genito-urinary (GUM) clinics. Only 15 sera positive for hepatitis B were also positive for hepatitis C. Our results confirm the low prevalence of hepatitis B in England and Wales, are consistent with previous estimates of carriage and suggest that many infections were acquired while resident outside the UK. Future prevalence studies should determine the country of birth and other risk factors for each individual in order to confirm these findings. (Accepted September 14 1998)*

**Goobs**, on December 6, 2011 at 8:21 pm said:

I became horribly ill after just 1 of the series of Hep B vaccines. Had to undergo a lymphnode biopsy because my blood work looked very bad. They thought I had cancer. I did not, but was ill for months. Did not go back for the 2nd and 3rd shots. Now have lupus. I think there is a very real connection and there should be compensation because serious autoimmune diseases destroy lives.

**DaftAida**, on December 11, 2011 at 4:03 pm said:

Nowadays, those trained in 'best practice' are just about everyone involved in the natal process are trained to 'red flag' any indicators that vaccines have been refused, objected to or infrequent. Immediately, the SS go into action on the assumption of neglect and/or abuse. This is often the start of a highly lucrative cycle of child protection, removal, re-allocation (sale). These children are most often loved by their most responsible parents and are therefore, unfortunately the target for trade.

Meanwhile, parents who use physical and verbal abuse on a daily basis are deemed fit as long as the required medications are taken and they smile sweetly at the qualified deranged during assessment. They (child protection agents) simply don't want damaged, disruptive children for sale; damaged goods.

The majority of newborn's enter this world receiving a needle containing warfarin; getting one's head around this fact will produce cognitive dissonance in the majority. Welcome to the world; prepare to die. Lovely.

**Stan**, on December 12, 2011 at 11:38 pm said:

There really is no stopping these people within the system as is. It is all just too corrupt to try merely to 'reform'. The only meaningful answer is to do away with the profit motive – move to a moneyless system, wherein & whereby people share their goods and services with one another, and give of their best in the process, out of a higher motive than the one that has characterized this corrupt way of being that humanity has engaged in for far too long now. Out of the highest motive there is, and could ever be: out of gratitude to our Creator for life with meaning.

And bring these corrupt medical practitioners to justice. Who have brought such ignominy to what should be a very honourable profession. And can still be; given the proper incentive. Of doing the very best for people. Not what's in it for the medical-pharmaceutical-government complex.

**DaftAida**, on December 13, 2011 at 12:53 am said:

The profession speaks a mystical language, in itself defying common language and often enough, common sense. Then there's the legalese which enables military, governmental, educational and so-called health practitioners to experiment, disable and murder anyone they choose for political

reasons. Reasons such as 'overpopulation' 'irradication of poverty' 'preventative care'. In addition, such agencies control the training and education of professionals to the exclusion of everything outside the curricula which includes the disinformation on the efficacy of vaccination in irradicating mortality, increasing longevity and ensuring health. Vaccinated themselves, they lack the critical reasoning ability to question, explore and learn outside their indoctrination. Which includes, of course, the wilful and useless torture and death of millions of animals; without mercy, without empathy. What kind of freaks emerge from this crash course in psychopathic disfunction?

People are up in arms about the destruction of the NHS in UK but they don't see that it was birthed containing a lethal, self-detonating virus beneath the benevolent facade of universal health care. Why, the majority have the false notion that NHS is 'free'! The virus within the conception of the NHS was the intention to outreach into every single womb on the land through successive generations. The purpose was depopulation; the purpose was control. Since the inception of the NHS, the military state has been given carte' blanche' to poison, disable and kill untold unborns, infants, children, adults. All who have been vaccinated have been brain damaged at the very least, me included. I'm aware I don't know how my mind would work had it not been contaminated with at least 6 vaccines through childhood.

Nowadays, due to the hugely profitable child trafficking racket of fostering and adoption, SS agents get involved via NHS in every point of the generative cycle should there be profit in doing so. At any time and under any circumstances, children can be snatched away never to be seen again just because a parent objects to mandatory vaccination.

They are immediately tagged at risk if they refuse or object or hold reservation about their child receiving a toxic shot. So it's very scary for parents to take a stand and hold it unless they are very well prepared for the potential consequences of doing so.

And so they should be. This is a very wicked world and to bring innocent fresh perfect life into this cesspit, the duty is to protect this purity. Unless you can do so, do you have the right to take on such a daunting responsibility? Are you up for it, for it will take everything you've got unless you have.

**Becky Evans**, on December 20, 2011 at 2:18 pm said:

"Whilst the risk factors for babies have changed little, there is now impressive evidence that for a preventive measure, hepatitis B vaccine is remarkable for the frequency, variety and severity of complications from its use. The toxicity of this vaccine is so unusual that, even if crucial data are regrettably concealed or covered by Court order, scientific evidence is already far higher than normally needed to justify severe restrictive measures."

[...] In 2011, the U.S. Vaccine court awarded the family of Tandra Harris almost \$500k in a wrongful death suit. Tandra was a little girl from Mississippi (one of only two other states to mandate vaccines and the highest infant mortality rate in the U.S.). Tandra died in 2009, and it was ruled she was infected with lupus as a result of her hepatitis B vaccine. Here’s the court case synopsis. [...]

**Here we present the US Federal Court's decision and order in full below – Health news and more**, on October 25, 2016 at 9:09 am said:

[...] Here we present the US Federal Court's decision and order in full below. The claimant in this case was dead when the damages were awarded. Tandra Harris died on November 9, 2009. Tandra's mother and Administratrix of her estate, Louvonia Deniece Harris, was substituted as petitioner, and an amended petition was filed on October 15, 2010. Hepatitis B vaccine is given to US infants at birth for a disease which they are not at risk of. Why? At risk groups are intravenous "recreational" drug abusers and those who practice unsafe sex – which rules out new born babies. Whilst the risk factors for babies have changed little, there is now impressive evidence that for a preventive measure, hepatitis B vaccine is remarkable for the frequency, variety and severity of complications from its use. The toxicity of this vaccine is so unusual that, even if crucial data are regrettably concealed or covered by Court order, scientific evidence is already far higher than normally needed to justify severe restrictive measures." Quote from French expert Dr. Marc Girard. See CHS article below for full details: UK Government Caught Lying On Baby Hep B Vax Safety. Whilst other evidence is embargoed by the French Courts, Dr Girard has been able to publish a scientific review of the unembargoed evidence from the French Courts of the vaccine's hazards (Autoimmun Rev 2005; 4: 96-100). Dr Girard shows that French health authorities suppress studies demonstrating serious risks. Hepatitis B vaccine has been shown in many peer reviewed research papers [including from Harvard University – detailed references at end] to be associated with numerous infant deaths in the USA and Europe, multiple sclerosis and numerous chronic auto-immune disorders [...])
